

# The Dterm® Series i

intelligent, ingenious,  
impressive

Empowered by Innovation

**NEC**

# Versatility

## Elevate your performance

Your business doesn't stand still. Neither do we. As technology changes and your communication needs evolve, NEC is there to provide the most up-to-date products and the latest features.

Even as we introduce new terminals, we're listening to our customers and incorporating their desires into our next product line. That's the case with our newest flagship terminal, the Dterm Series i.

## Convenient features make operation easier

New functions offer more convenience than ever to the busy office environment. The Dterm Series i can be programmed for a variety of ringing sounds.\* The variety of ring tones helps to determine whose phone is ringing in a crowded work area.

Three specific buttons offer one-touch convenience for several popular functions that formerly took multiple steps. With a single touch of the MIC key, the user's microphone is muted, shutting off transmission from a noisy office or allowing the user to hold a separate private conversation. The Message button lets you check your voice mail with just one touch, while the Directory key displays a list of numbers.

The detachable Key Block allows you to easily customize keys for a foreign language or an Automatic Call Distribution application. The numbers and letters are even laser printed to last longer.

Visual indication of volume control has now been added to display models, allowing users

to modulate volume level more accurately. The LCD offers three lines of 24 characters per line — more information means more informed choices.

Approved for home use, Dterm Series i terminals enable employees to go more places and do more things by facilitating telecommuting. You can literally bring Dterm Series i features and capabilities home with you!

## It's easier than ever to:

- Install adapters or optional units
- Adjust the housing angle (tilt)
- Mount the phone on the wall
- Utilize the Directory Card Unit

These simple adjustments let you tailor the Dterm Series i to your needs.

## Choices for every user

Available in black or soft white, the Dterm Series i is an attractive addition to any work environment. With many models to choose from, each station user can enjoy customized service and performance. From a single line analog model to a 32-line digital display model, standard intelligent features can help raise productivity throughout your enterprise or small business.

an elegant and sophisticated business  
tool that helps you pick  
up performance

\*Features may vary based upon system supported.
