

Multi-Point Video Conferencing Service

Multi-way video conferencing is not just for the big guys anymore.

You don't need to invest in an expensive telepresence system, purchase video conferencing bridges or expose your bridge credentials to third-parties to have a high-quality video conference with your sales team, customers or partners.

SimpleSignal has taken out the complexity and expense of multi-way video conferencing so you can simply pick up your video phone and dial into a video bridge whenever you want.

Problem

You want more than point-to-point video conferencing but don't want to buy an expensive bridge. Or you have a bridge but don't want to expose your bridge credentials to third parties.

Multi-point video conferencing solutions such as Skype exist on-line but do not offer quality appropriate for business video conferences.

There's also the problem of interoperability. You may have a system from one vendor and seek to connect to a third-party with different technology.

Solution

Our Multi-Point Video Conferencing Service is a cost-effective, hosted, outsourced solution. Secure multi-point video conferencing bridges, co-location facilities and network management are maintained so your enterprise doesn't have to.

We enable ad hoc inter-enterprise video conferencing in a secure environment, maintaining video conferencing behind your firewall. Now you can easily and securely allow remote salespeople, customers, executives or partners to join your video conferences.

How It Works

The Multi-Point Video Conferencing Service provides even a small business with:

- Instant 3-way (or more) high-quality video conferencing without spending thousands of dollars
- A ten-digit number and PIN to easily dial in to a bridge
- Firewall access for remote workers and third-parties
